

Amendments to the Specification:

Please insert the following Abstract on page 26 of the specification:

ABSTRACT OF THE DISCLOSURE

The present invention relates to an improved method and arrangements for fast constitution of a wireless communication connection between at least two portable devices, wherein preferably one of the portable devices is capable for cellular communications on a cellular network. Particularly, the present invention relates to an arrangement of several radio terminal devices and a multipart radio terminal device arrangement, which comprises a core device and several peripheral devices. The fast constitution includes an establishment of a wireless communication connection between the participating portable devices on the basis of configuration information obtained by the means of identification means allowing information exchange between devices implementing such identification means with spacious proximity. The fast constitution includes additionally a transfer of control over either of the devices to the other one, wherein the transfer comprises a selective and/or at least partial transfer of control over functions, operations and/or interfaces such as user interfaces and/or applications. The transfer of the control is preferably performed on the basis of the configuration information.
